

DAY 06 / 30

BASECAMP • FUNDAMENTALS

What is a Large Language Model (LLM)?

What is a Large Language Model (LLM)?

An LLM — the tech behind ChatGPT, Claude, Gemini — is, at its core, a very sophisticated next-word predictor.

- ◆ At its core: a very sophisticated next-word predictor
- ◆ "Large" means huge training data plus billions of parameters
- ◆ No fact database — it generates plausible text, usually (not always) true

“Understanding "next-token prediction" is the single most useful mental model for using these tools well: you're not talking to a database, you're steering a very good pattern-completion engine.”

Follow along – Day 7 drops tomorrow.
