

DAY 10 / 30

BASECAMP · FUNDAMENTALS

AI ethics & bias: the human side of the machine

AI ethics & bias: the human side of the machine

Ten days into this series, one theme keeps resurfacing: AI systems inherit everything from their data — including our flaws.

- ◆ Consent — was the data the model was trained on used with permission?
- ◆ Transparency — do users know they're interacting with AI, and how decisions get made?
- ◆ Accountability — when an AI system causes harm, who is responsible: the developer, the deployer, or the user?

DAY 10 / 30

“Which AI ethics issue concerns you most: bias, privacy, or accountability?”

Follow along – Day 11 drops tomorrow.
